## DETAILED ACTION

### *Allowable Subject Matter*

1. The following is an examiner's statement of reasons for allowance:

The present invention is directed to an image reproduction apparatus including an ATS generation unit, an ATS multiplexing unit, channel reproduction units, a reproduction ATS generation unit, a reproduction timing generation unit, and a multiplexing unit. Each independent claim identifies the uniquely distinct features "a reproduction control signal for informing switching of video between arbitrary channels is inputted to the packet rewriting unit of each channel reproduction unit and the reproduction timing generation unit, and the reproduction timing generation unit generates a PTS and a DTS for correcting discontinuity in MPEG video streams resulting from the channel switching in accordance with the reproduction control signal, thereby correcting discontinuity other than that in the PTS and the DTS in the MPEG video streams resulting from the channel switching". The closest prior art, Lenihan et al. (6,169,843 B1), Svanbro et al. (US 6,680,921 B1) and Ohara et al. (US 2001/0041060 A1) disclose conventional image reproduction apparatus, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
